3D CORONA TREATMENT

3D Corona Treatment promotes adhesion prior to coating. The treatment is ideal for PE, PP, PET, nylon, vinyl, polystyrene, polycarbonate, PVC and all other types of thermoformed and thermoset plastics. For more information please contact us directly.

DIAMOND-LIKE CARBON [DLC]

Diamond-Like Carbon (DLC) coatings are low-absorbing, amorphous carbon coatings that take on hardness and durability characteristics similar to diamond. These coatings have a proven track record of protecting optics from harsh environmental conditions, such as airborne particulate impacts, corrosive fluids, environmental extremes, and improper physical handling, while offering acceptable optical performance, typically in the infrared spectrum. The coatings are low stress, hydrophobic, and lubricious (offering a low coefficient of friction). For more information please contact us directly.

PREHEAT - For more information please contact us directly.

Proudly Canadian. North American driven.
